

## Options to Connect Standard Devices (e.g. laptop) to Our System

**Note: You must provide your own working equipment and cables. The Regional Municipality of Niagara will not be responsible for any external users equipment.**

To use the external video inputs at the defendant or witness desk, you will need either an **HDMI** cable or a **VGA** cable to display information on the courtroom screens. If audio is required, the **HDMI** cable will automatically carry the audio to the courtroom system. If you are using a **VGA** cable, and require audio, you will need to use a **3.5mm audio** cable to send audio to the courtroom system.

When connecting to the **HDMI** or **VGA** port at the witness desk, the light beside the port will turn on once a connection has been made.

If both the **HDMI** and **VGA** port have devices connected at the same time on either of the desks, it will take the **HDMI** first because, it has a higher priority.
